Description

The Polyethylene heat-shrink tube has a **high shrinkage ratio of 3:1** and is 1 meter in length. It is ideal to cover irregular or complex shapes thanks to its capacity to shrink to a third of its original size. The adhesive liner in this tube, when melted, provides a watertight seal, which encapsulates the cable joints.

Applications include the following:

- Watertight encapsulation and sealing of cable joints.
- Electrical insulation.
- Environmental protection against moisture, dust and chemicals.
- Mechanical protection against abrasions on cables and small parts.
- Pull protection at the cable and connector joints to prevent damage caused by bending.
- Grouping and organisation of cables and pipes.
- Colour coding of cables and components.

This kit includes 4 Units with the following sizes:

- 4 x 24mm and 1m in length
- 4 x 18mm and 1m in length
- 4 x 9mm and 1m in length
- 4 x 3mm and 1m in length

Take advantage of the offers that we available at LEDKIA, and like always, we have unbeatable prices.
