## ***Description***

This LED beacon with a PIR sensor is made from high quality ABS material, making it flame resistant and giving it an elegant and modern design. Made with a 1.5W COB LED, it emits 165 lumens and a soft, uniform and well-distributed white light that doesn't bother the eyes. The driver is included inside. The beacon remains off until the infrared sensor detects movement within its range (1-1.5 meters and a 120° angle), 60 seconds after the first movement was detected, the device switches off. This allows the bulb a longer lifespan and provides a great way to save energy. Its many different uses include: stairwells, corridors, lift entrances, car parks, hotels, etc...
