Technical Details

Maximum Power:	200 W
Voltage:	220-240V AC
Multi-Voltage:	100-240V AC
Frequency:	50-60 Hz
Dimmable:	TRIAC
Use:	Indoor
IP Protection:	IP20

Material:	PC, Glass
Installation:	Recessed
Size:	50x50 mm
Working Temperature:	-10°C ~ +40°C
Manual:	Yes
Warranty:	3 Years
Certifications:	CE & RoHS, UKCA

Description

This touch switch is the ideal solution to change the switches in your home with a touch of design. Its glass bezel is made of high quality and resistant materials. As they are capacitive switches, they will be activated only by the touch of your finger, no pressure is required. Switched switches can control the same light from two different switches. They are widely used in corridors, where one switch is placed at the beginning and the other at the end, or in bedrooms where one switch is placed at the entrance and the other next to the bed. In their installation, the phase must pass through both switches before being connected to the lamp and both switches must be connected by a pair of wires. **They can be controlled remotely using the controllers in the accessories section.**

These switches are standard size, so they can be installed in any frame, although we recommend that they are installed in the glass frame which can be found in the accessories section for a more professional finish. The glass frame includes the necessary elements to be mounted on a standard universal box. **In addition, this switch allows you to regulate the light intensity of the bulbs or luminaires to which it is connected, as long as they are dimmable.**

* The switch dims from 30% - 100% in TRIAC.

* It is recommended to include the LED anti-flicker adaptation module from the accessories section in LED electrical installations that use switches that require a minimum load, such as classic switches, touch switches, dimmers or pilot switches, among others.

* Product includes electrical part, glass trim and sticker.
