Technical Details

Cable Section	35 mm	IP Protection	IP20
Use	Indoor	Colour	Copper

Description

The 35mm² Bare Copper Grounding Conductor is a single-wire protective conductor made of electrolytic copper.

This conductor is exclusively designed to **ensure the protection of the connected earth, guaranteeing the grounding of the electric current in the event of an insulation failure in the installation.**

The cable cross-section is 35mm². Sections of 35mm² are usual in earthing conductors and its section is standardised according to UNE 20460-5-54.

It is a flexible and robust cable, being suitable for use in difficult layouts, as well as in all types of environmental conditions.
