Size:	300x300x60 mm
Frame:	30x30 cm

Includes:	Screws
Warranty:	5 Years
Certifications:	CE & RoHS, UKCA

Description

The Surface Kit for 30x30cm panels is designed to be able to install the 30x30cm LED Panels in spaces that do not have the removable ceiling where this type of LED lighting is usually installed.

LED panels are a type of luminaire that is present in a wide variety of interior spaces, including offices, supermarkets or hospitals. They offer a uniform and high quality lighting, free of annoying reflections. However, not all places have a removable false ceiling that allows this type of LED lighting to be installed directly. This is where the Surface Kit for 30x30cm panels comes in, which **has been specifically designed to offer the possibility of installing LED panels in spaces where it would not otherwise be possible.**

This surface kit is made up of 4 high quality aluminium profiles that allow the LED panel, the driver and the wiring to be housed inside it so that it can be easily fixed in any room of your choice, without having to give up modern, energy-saving lighting.

In our online lighting shop you can find the Surface Kit for 30x30cm panels available in white or silver, and can be used for panels with dimensions of 30x30 centimetres.

Enjoy the best lighting at spectacular prices. * LED panel not included.
