## Description

This Kit is made up of a iron base which is ready to be installed on a SAMSUNG UFO LED High Bay and a Motion Sensor for SAMSUNG UFO LED High Bay that turns our luminaire ON when it detects movement within its range, returning to standby or power-saving mode when the movement is no longer detected, saving on energy consumption.

Its detection range can be configured, as with its on-time (period in which the luminaire remains 100% lit after no movement is detected), its standby or power-saving mode, the brightness of the standby or power-saving mode (50%, 40%, ...) and its light detection mode (the luminaire can be programmed to light up if ambient light is low enough).

It has a detection distance of up to 8 metres, a 150° angle when installed on walls and a 360° angle when installed on ceilings.

Perfect for lighting industrial warehouses, offices, hallways, supermarkets, etc.

Measurements:

- Support: 110x40 mm
- Motion Sensor: 100x50x25 mm

\*Compatible with SAMSUNG UFO LED High Bays.
