Description

This Kit includes a support and a twilight sensor for SAMSUNG UFO LED High Bays, allowing us to optimize our industrial lighting.

With a 360° detection radius and a 1-100% dimmable flow, this twilight sensor is compatible with luminaires equipped with dimmable 1-10V Drivers. **The amount of light produced by the luminaire will depend on the amount of natural light within its radius** and will increase and decrease gradually, allowing us to efficiently maintain adequate lighting.

The kit consists of a support and twilight sensor for a **SAMSUNG UFO LED High Bay, ideal for installation in warehouses, workshops or petrol stations**, generally large spaces in which having this type of lighting system will provide considerable savings on electrical consumption.

The sensor support is made from iron.

Measurements:

- Support: 75x40 mm
- Twilight Sensor: Ø20x70 mm

*Compatible with SAMSUNG UFO LED High Bays.
