Colour	Ref:
White	3466-7626
Black	3466-7627

Technical Details

Track type:	Single-Circuit	**Width:**	106 mm
Installation:	Track	**Length:**	18 mm
Size:	106x106x18 mm	**Warranty:**	3 Years
Height:	106 mm	**Certifications:**	CE & RoHS, UKCA

Description

The X Connector for UltraPower Single Phase Track is the connector that will allow us to make rail "crossovers". This means that we can add a section of rail that goes to the left, another that goes to the right and a last section that continues on the same straight line. In short, we will have two straight lanes that intersect perpendicularly at one point.

It is made of high quality materials and is reinforced thanks to a steel plate located at the bottom, making it highly resistant to knocks and bends.

LED track lighting is the most versatile lighting system available. **It is specially designed to allow the mobility of spotlights and other luminaires along the track.** This allows the light in the space to be adapted to the arrangement of the products or elements that need to be highlighted. This aspect is especially attractive in commercial environments such as shops, showrooms, hotels or restaurants, to name but a few examples.
