Technical Details

Frequency	50-60 Hz
Current Intensity	6.25 A
Electric Insulation Class	I
Use	Indoor
IP Protection	IP20

Material	Aluminum
High	42 mm
Wide	98 mm
Lenght	160 mm

Description

This 12V 6.25A 75W Power Supply is ideal for connecting indoor lighting elements that cannot be used with a direct connection to the mains. Transform the alternate current from the mains to 12V DC.

It's recommended for permanent charges of up to 75W. The current output is 6.5A.

Its aluminium housing provides it with a high resistance and a lightweight design. It has both CE and RoHS certifications which guarantee both quality and safety, whilst also confirming that the item contains no toxic or harmful substances.

It features an adjuster that allows us to adjust the output voltage between a minimum 10V and a maximum 15V.
