## Description

**This Surface Kit for 60x60cm LED Panels is designed for installing panels in areas where the ceiling is neither removable or false.**

LED Panels are used in a huge variety of indoor areas, including offices, supermarkets and hospitals. They offer uniform, high quality light that's free of annoying glare. However, not all spaces have false ceilings in which to install these panels directly. This is where the 60x60 Surface Kit comes in, as **it's been specifically designed to allow us to install LED Panels in areas in which it would have been impossible.**

**This Surface Kit is made up of four high quality Aluminium Profiles which allow us to easily insert the Panel, its driver and the wiring inside.** This can be done in any setting, so you won't have to miss out on modern and low consumption lighting.

You can find the 60x60cm Surface Kit for panels available in white or silver, and can be used for panels with of 60x60cm dimensions.

Enjoy the best lighting at spectacular prices. All products purchased have a 5 year warranty.

\* LED panel not included.
