Wide	70 mm	Colour	Black, White

Description

With the T Connector for UltraPower Single Phase Track we can add a section of track extending the original straight line and at the same time another perpendicular to it. In short, this connector is a combination of type I and type L connectors.

It is made of high quality materials and is reinforced with a steel plate at the bottom, making it highly resistant to knocks and bending.

With LED lighting we can enjoy a high quality light, with a **durability 10 times greater** than traditional alternatives and with minimum energy consumption. That is why it is the most recommended option for spaces such as shops, where activity takes place for many hours a day and lighting that does not distort the colours is required.
