Description

The Surface Kit for 60x60 LED Panel PHILIPS Ledinaire RC065Z SMB is designed to be able to install the 60x60cm LED panels in spaces that do not have the removable ceiling in which this type of LED lighting is usually installed.

LED panels are a type of luminaire found in a wide variety of interior spaces, including offices, supermarkets and hospitals. They provide uniform and high quality lighting, free from annoying glare. However, not all places have a removable false ceiling that allows this type of LED lighting to be installed directly. This is where the Surface Kit for 60x60cm panels comes into play, which **has been specifically designed to offer the possibility of installing LED panels in spaces where it would otherwise not be possible.**

This surface kit consists of 4 high quality aluminium profiles that allow you to house the LED panel, the driver and the wiring inside to fix it comfortably in any room of your choice, without having to give up modern and energy efficient lighting.

In our online lighting shop you can find the 60x60cm Panel Surface Kit available in white and can be used for panels with dimensions of 60x60 centimetres.

Enjoy the best lighting at spectacular prices.

* LED panel not included.
