Description

Black Waterproof 5.5m LED String Lights and 8 x E27 4W Filament LED Bulbs is widely used for decorative applications in outdoor areas. This String of bulbs has connectors at each end that are used for feeding and for joining the strings in series. We can join up to 6x strings of bulbs, making up a chain of 30 metres in length and 48 bulbs in total. Between each bulb is a length of 60cm.

The brightness of the string of bulbs will depend on the specific bulbs we use. This provides us with a large variety of possibilities as, for example, we can use filament bulbs for a retro look, or use more modern looking bulbs. It's important that **we choose a bulb that will adequately light the space, keeping in mind the lighting requirements of each area.**
