## ***Description***

The lights and wall lamps of the decorative LED range possess an innovative and minimalist design. They are made of 'valgam', a material composed by special plaster, fiberglass, acrylic resins and other high quality elements that give the product solid and consistent properties, much like products made from aluminium. Valgam is a compact material without porosities, it's fireproof and is respectful towards the environment.

It can be painted or plastered however wanted, providing you with new ideas and possibilities, or it can be painted with contrasting colours, highlighting it on the wall or ceiling where it's placed.

Unalterable over time, resistant to environmental factors such as the heat and the cold and no chance of rust or damage, it can be used indoors and outdoors (always in sheltered places, protected from the rain). Recommended for any room in which decorative indirect light or a nightlight is required.

Possible uses: Banquets, waiting rooms, hallways, dealers, bedrooms, etc.
