Description

This Adjustable Optic for a SAMSUNG UFO LED High Bay (60° / 90° / 115°) allows us to adjust the opening angle of our luminaire into 3 positions (60° / 90° / 115°).

Industrial LED lighting covers the full range of professional luminaires as, due to the environment, they demand a higher durability and power. Meanwhile, in any home, the most powerful bulb we use emits a few hundred lumens, or may even reach a thousand, but when referring to Industrial LED High Bays,, we're talking about tens of thousands of lumens.

Due to the power of these luminaires, it can sometimes be bothersome to look directly at them. They're therefore a very interesting element to have as this **allows us to adjust the opening angle that best adapts to the requirements of our environment and we can avoid possible glare without losing any quality within the emitted light.**

*Compatible with HBS UFO LED High Bays

*LED High Bay NOT INCLUDED.
