Description

The 60x30cm Surface Panel Kit is designed to be able to install 60x30cm LED panels in spaces that do not have the detachable ceiling on which this type of LED lighting is usually installed.

LED panels are a type of luminaire that is present in a wide variety of indoor spaces, including offices, supermarkets or hospitals. They offer uniform and high quality lighting, free of annoying reflections. However, not all places have a false detachable ceiling that allows this type of LED lighting to be installed directly. This is where the 60x30cm Panel Surface Kit comes in, which **has been specifically designed to offer the possibility of installing LED panels in spaces where otherwise it would not be possible.**

This surface kit consists of 4 high quality aluminum profiles that allow to accommodate the LED panel, the driver, and the wiring inside to fix it comfortably in any room of your choice, without having to give up modern lighting and low consumption.

In our online lighting shop you can find the Surface Kit for panels of 60x30cm available in white or silver, and can be used for panels with dimensions of 60x30 centimeters.

Enjoy the best lighting at spectacular prices. All purchased products offer a 2-year warranty.

* LED panel not included.
