Technical Details

Voltage:	220-240V AC
Multi-Voltage:	100-240V AC
Frequency:	50-60 Hz
Intensity Level:	10A
Use:	Indoor
IP Protection:	IP20
Material:	PC

Installation:	Recessed
Size:	86x86 mm
Height:	86 mm
Width:	86 mm
Working Temperature:	-10°C ~ +40°C
Warranty:	3 Years
Certifications:	CE & RoHS, UKCA

Description

This 1-Gang 3-Way Switch with PC Frame is the ideal solution for switching, giving a touch of design to the switches in your home. Available in two colours, they have great strength and durability. This switch is known as a 3-way switch or a crossover switch. **The crossover switches are combined with the switches to be able to control the same light from as many switches as you want.** They are widely used in double rooms where we want to be able to control the main light from the door as well as from both sides of the bed. They are placed between two switched switches (**See attached installation diagram**)

These switches have the standard size, so they can be installed in any frame. They come with a PC frame although it is possible for them to be installed in the glass frame which can be found in the accessories section for a more professional finish. The glass frame includes the necessary elements to be able to be installed in a standard universal box.
